

Environmental Protection Department

Environmentally responsible project
implementation and operation

- + Obtaining **environmental permits and decisions**
- + **Solutions** aligned with the principles of **sustainable development**
- + **Field studies** and **measurements.**

Our Services

We support our clients in **achieving their objectives** and **delivering projects** of all scales – from small initiatives to large, complex developments – in a **sustainable and environmentally responsible manner**.

Our services include:

- + **Environmental studies** and field measurements,
- + **Preparation and coordination** of all required environmental documentation,
- + **Obtaining administrative decisions** governing environmental aspects of projects throughout their entire life cycle, **from pre-design through to decommissioning**.

We provide **effective support** in addressing current environmental challenges while **helping to identify and prevent potential risks** in the future.

We offer extensive knowledge combined with practical, hands-on experience:

Our team comprises highly qualified specialists with expertise across the full spectrum of environmental consultancy, including **protection and management of individual environmental components**, **environmental reporting** (carbon footprint assessments, greenhouse gas (GHG) emissions monitoring systems and activity data reporting, development and implementation of circular economy solutions), **practical application of environmental legislation** in its broadest sense.

We approach every assignment with commitment and responsibility, and we confidently undertake new, complex and non-standard projects.
