

Shaft Lining Testing Laboratory

- + Technical expert assessments of shaft linings
- + On-site testing of concrete strength.

Our Services

- + Determination of **concrete compressive strength** using **non-destructive testing methods**, such as **sclerometric and ultrasonic testing**.
- + **Ultrasonic measurement of tubbing lining thickness**.
- + **Ultrasonic thickness measurement of pipeline walls**.
- + **Thickness measurement** of one-side-accessible concrete elements using **the impact-echo method**.
- + **Concrete core sampling from shaft linings** using a **drilling rig** with an independent power supply.
- + Preparation of **expert technical opinions** on the basis of **authorisations held by a certified expert of the State Mining Authority (WUG)**, authorised for mine operations in Group XIV – shaft linings.
